

Story: Register User

As a user,

I want to have an account,

So that I can select items and order them.

So for register user, am not so sure about the **description**.

Commented [RS1]: Am not so sure if its ok

For add to cart, I thought of adding a condition where items stay in cart even if user **logs out** – maybe later?

Wireframe

Hand-drawn wireframe of a registration form titled "VESO". The form contains four input fields labeled "name", "email", "address", and "pass". Below the "pass" field is a button labeled "Register".

Acceptance criteria

- User cannot make payment unless they are registered.
- User can surf to the registration page
- Registration **form** is available with the required fields
- User is successfully registered with the **correct** credentials.

NB: I thought of other criteria's but we'll discuss about them later
