

Story: Change Password

As a user,
I want to have an option to change the password,
so that I do not have to worry about forgetting it.

Wireframe

Acceptance Criteria

- If user tries to log in and the password is incorrect, the 'Reset password' option is show.
- If the username is incorrect, this is shown by display the message: "User does not exist."
- The password is reset using the **security question** of the profile with his name.
- The answer to the security question is checked case insensitively.
- The new password must conform to all the rules.
